

Meaning in the Brain

Giosuè Baggio

The MIT Press
Cambridge, Massachusetts
London, England

Contents

Preface	x
Introduction	xiii
I RELATIONAL SEMANTICS	1
1 The Binding Problem in Semantics	3
1.1 Binding and Visual Perception	4
1.2 Binding Meanings through Time	8
1.3 Semantic Analysis-by-Synthesis	15
2 Neural Bases of Relational Semantics	25
2.1 Electrophysiology of Relational Semantics	26
2.2 Brain Networks for Relational Semantics	46
2.3 The Cortical Seats of Semantic Binding	61
3 A Dynamic Theory of Semantic Binding	73
3.1 Binding through Processing Cycles	75
3.2 A Neurocognitive Model of the N400	84
3.3 Relations with Computational Models	91
II INTERPRETIVE SEMANTICS	95
4 From Binding to Interpretation and Back	97
4.1 Semantics as Computational Theory	100
4.2 Principles of Discourse Processing	113
4.3 Three Dimensions of Interpretation	125
5 Brain Systems for Discourse and Logic	135
5.1 Referential Processing in the Brain	136
5.2 Elaborative Processing in the Brain	154

5.3	Inferential Processing in the Brain	165
6	Discourse Models as Cortical Stable States	173
6.1	An Extended Brain Network for Semantics	174
6.2	The Emergence of Stable Representations	181
6.3	From Minimal Models to Complex Actions	189
III	EVOLUTIONARY SEMANTICS	195
7	Signaling and the Evolution of Meaning	197
7.1	Formal Properties of Signaling Games	201
7.2	Role Asymmetry and Code Transmission	206
7.3	Signaling Games and Natural Language	211
8	Plasticity in the Brain's Semantic System	217
8.1	Ontogenesis of the Semantic System	218
8.2	Semantic Learning and Neural Plasticity	228
8.3	The Neural Bases of Signaling Behavior	234
9	Brains as Meaning Transmission Machines	241
9.1	Prior Structure in Meaning Acquisition	245
9.2	Productive and Receptive Transmission	250
9.3	The Neural Origins of Lexical Meanings	261
IV	SYNOPSIS	271
10	Meaning in the Brain	273
	Bibliography	279
	Index	341
