

A LOGICAL
INTRODUCTION
TO PROBABILITY
AND INDUCTION

FRANZ HUBER

*University
of Toronto*

OXFORD
UNIVERSITY PRESS

CONTENTS

<i>Preface</i>		ix
<i>Acknowledgments</i>		xiii
1.	Logic	1
1.1.	Propositional Logic	1
1.2.	Predicate Logic	7
1.3.	Exercises	14
	Readings	19
2.	Set Theory	21
2.1.	Elementary Postulates	21
2.2.	Exercises	28
	Readings	35
3.	Induction	36
3.1.	Confirmation and induction	36
3.2.	The problem of induction	38
3.3.	Hume's argument	41
	Readings	46

4.	Deductive Approaches to Confirmation	47
4.1.	Analysis and explication	47
4.2.	The ravens paradox	49
4.3.	The prediction criterion	53
4.4.	The logic of confirmation	55
4.5.	The satisfaction criterion	62
4.6.	Falsificationism	65
4.7.	Hypothetico-deductive confirmation	69
4.8.	Exercises	72
	Readings	74
5.	Probability	75
5.1.	The probability calculus	75
5.2.	Examples	81
5.3.	Conditional probability	84
5.4.	Elementary consequences	87
5.5.	Probabilities on languages	92
5.6.	Exercises	94
	Readings	97
6.	The Classical Interpretation of Probability	98
6.1.	The principle of indifference	98
6.2.	Bertrand's paradox	100
6.3.	The paradox of water and wine	106
	Reading	110
7.	The Logical Interpretation of Probability	111
7.1.	State descriptions and structure descriptions	111
7.2.	Absolute confirmation and incremental confirmation	122
7.3.	Carnap on Hempel	123
7.4.	The justification of logic	126

7.5.	The new riddle of induction	132
7.6.	Exercises	137
	Readings	138
8.	The Subjective Interpretation of Probability	139
8.1.	Degrees of Belief	139
8.2.	The Dutch Book Argument	140
8.3.	The Gradational Accuracy Argument	147
8.4.	Bayesian Confirmation Theory	155
8.5.	Updating	168
8.6.	Bayesian Decision Theory	173
8.7.	Exercises	180
	Readings	185
9.	The Chance Interpretation of Probability	187
9.1.	Chances	187
9.2.	Probability in physics	190
9.3.	The principal principle	195
	Readings	203
10.	The (Limiting) Relative Frequency Interpretation of Probability	204
10.1.	The justification of induction	204
10.2.	The straight(-forward) rule	207
10.3.	Random variables	215
10.4.	Independent and identically distributed random variables	217
10.5.	The strong law of large numbers	222
10.6.	Degrees of belief, chances, and relative frequencies	227
10.7.	Descriptive statistics	230
10.8.	The central limit theorem	238

10.9.	Inferential statistics	243
10.10.	Exercises	255
	Readings	257
11.	Alternative Approaches to Induction	259
11.1.	Formal learning theory	259
11.2.	Putnam's argument	265
	Readings	268
	<i>References</i>	271
	<i>Index</i>	283
