Introduction

Games with Ordinal Payoffs

Ordinal Games in Strategic Form

2.1	Game frames and games	15
2.2	Strict and weak dominance	22
2.3	Second-price auction	27
2.4	The pivotal mechanism	30
2.5	Iterated deletion procedures	33
2.5.1	IDSDS	33
2.5.2	IDWDS	35
2.6	Nash equilibrium	37
2.7	Games with infinite strategy sets	42
2.8	Proofs of theorems	44
2.9	Exercises	48
2.9.1	Exercises for Section 2.1: Game frames and games	48
2.9.2	Exercises for Section 2.2: Strict/weak dominance	49
2.9.3	Exercises for Section 2.3: Second price auction	50
2.9.4	Exercises for Section 2.4: The pivotal mechanism	52
2.9.5	Exercises for Section 2.5: Iterated deletion procedures	53
2.9.6	Exercises for Section 2.6: Nash equilibrium	55

2.9.7	Exercises for Section 2.7: Games with infinite strategy sets	55
2.10	Solutions to exercises	57

Perfect-information Games

3.1	Trees, frames and games	73
3.2	Backward induction	78
3.3	Strategies in perfect-information games	81
3.4	Relationship between backward induction and other solutions	84
3.5	Perfect-information games with two players	88
3.6	Exercises	92
3.6.1	Exercises for Section 3.1: Trees, frames and games	92
3.6.2	Exercises for Section 3.2: Backward induction	93
3.6.3	Exercises for Section 3.3: Strategies in perfect-information games	94
3.6.4	Exercises for Section 3.5: Two-player games	96
3.7	Solutions to exercises	99

General Dynamic Games

4.1	Imperfect Information	115
4.2	Strategies	122
4.3	Subgames	124
4.4	Subgame-perfect equilibrium	126
4.5	Games with chance moves	132
4.6	Exercises	138
4.6.1	Exercises for Section 4.1: Imperfect information	138
4.6.2	Exercises for Section 4.2: Strategies	139
4.6.3	Exercises for Section 4.3: Subgames	139
4.6.4	Exercises for Section 4.4: Subgame-perfect equilibrium	140
4.6.5	Exercises for Section 4.5: Games with chance moves	142
4.7	Solutions to exercises	146

Games with Cardinal Payoffs

Expected Utility Theory

5.1	Money lotteries and attitudes to risk	167
5.2	Expected utility: theorems	169
5.3	Expected utility: the axioms	175
5.4	Exercises	182
5.4.1	Exercises for Section 5.1: Money lotteries and attitudes to risk	182
5.4.2	Exercises for Section 5.2: Expected utility theory	183
5.4.3	Exercises for Section 5.3: Expected utility axioms	184

5.5	Solutions to Exercises	185
------------	-------------------------------	------------

Strategic-form Games

6.1	Strategic-form games with cardinal payoffs	191
6.2	Mixed strategies	194
6.3	Computing the mixed-strategy Nash equilibria	199
6.4	Strict dominance and rationalizability	204
6.5	Exercises	208
6.5.1	Exercises for Section 6.1: Strategic-form games with cardinal payoffs .	208
6.5.2	Exercises for Section 6.2: Mixed strategies	209
6.5.3	Exercises for Section 6.3: Computing the mixed-strategy Nash equilibria	210
6.5.4	Exercises for Section 6.4: Strict dominance and rationalizability	212
6.6	Solutions to exercises	214

Extensive-form Games

7.1	Behavioral strategies in dynamic games	225
7.2	Subgame-perfect equilibrium revisited	235
7.3	Problems with the notion of subgame-perfect equilibrium	238
7.4	Exercises	240
7.4.1	Exercises for section 7.1: Behavioral strategies in dynamic games	240
7.4.2	Exercises for section 7.2: Subgame-perfect equilibrium revisited	242
7.5	Solutions to exercises	247
