Preface	xiii
Acknowledgments	xvii
1 Introduction	1
1.1 Controversies	1
1.2 A guided tour of decision theory	6
Part One Foundations	11
2 Coherence	13
2.1 The “Dutch Book” theorem	15
2.1.1 <i>Betting odds</i>	15
2.1.2 <i>Coherence and the axioms of probability</i>	17
2.1.3 <i>Coherent conditional probabilities</i>	20
2.1.4 <i>The implications of Dutch Book theorems</i>	21
2.2 Temporal coherence	24
2.3 Scoring rules and the axioms of probabilities	26
2.4 Exercises	27
3 Utility	33
3.1 St. Petersburg paradox	34
3.2 Expected utility theory and the theory of means	37
3.2.1 <i>Utility and means</i>	37
3.2.2 <i>Associative means</i>	38
3.2.3 <i>Functional means</i>	39
3.3 The expected utility principle	40
3.4 The von Neumann–Morgenstern representation theorem	42
3.4.1 <i>Axioms</i>	42
3.4.2 <i>Representation of preferences via expected utility</i>	44
3.5 Allais’ criticism	48
3.6 Extensions	50
3.7 Exercises	50

4	Utility in action	55
4.1	The “standard gamble”	56
4.2	Utility of money	57
	4.2.1 <i>Certainty equivalents</i>	57
	4.2.2 <i>Risk aversion</i>	57
	4.2.3 <i>A measure of risk aversion</i>	60
4.3	Utility functions for medical decisions	63
	4.3.1 <i>Length and quality of life</i>	63
	4.3.2 <i>Standard gamble for health states</i>	64
	4.3.3 <i>The time trade-off methods</i>	64
	4.3.4 <i>Relation between QALYs and utilities</i>	65
	4.3.5 <i>Utilities for time in ill health</i>	66
	4.3.6 <i>Difficulties in assessing utility</i>	69
4.4	Exercises	70
5	Ramsey and Savage	75
5.1	Ramsey’s theory	76
5.2	Savage’s theory	81
	5.2.1 <i>Notation and overview</i>	81
	5.2.2 <i>The sure thing principle</i>	82
	5.2.3 <i>Conditional and a posteriori preferences</i>	85
	5.2.4 <i>Subjective probability</i>	85
	5.2.5 <i>Utility and expected utility</i>	90
5.3	Allais revisited	91
5.4	Ellsberg paradox	92
5.5	Exercises	93
6	State independence	97
6.1	Horse lotteries	98
6.2	State-dependent utilities	100
6.3	State-independent utilities	101
6.4	Anscombe–Aumann representation theorem	103
6.5	Exercises	105
Part Two	Statistical Decision Theory	109
7	Decision functions	111
7.1	Basic concepts	112
	7.1.1 <i>The loss function</i>	112
	7.1.2 <i>Minimax</i>	114
	7.1.3 <i>Expected utility principle</i>	116
	7.1.4 <i>Illustrations</i>	117
7.2	Data-based decisions	120
	7.2.1 <i>Risk</i>	120
	7.2.2 <i>Optimality principles</i>	121

7.2.3	<i>Rationality principles and the Likelihood Principle</i>	123
7.2.4	<i>Nuisance parameters</i>	125
7.3	The travel insurance example	126
7.4	Randomized decision rules	131
7.5	Classification and hypothesis tests	133
7.5.1	<i>Hypothesis testing</i>	133
7.5.2	<i>Multiple hypothesis testing</i>	136
7.5.3	<i>Classification</i>	139
7.6	Estimation	140
7.6.1	<i>Point estimation</i>	140
7.6.2	<i>Interval inference</i>	143
7.7	Minimax–Bayes connections	144
7.8	Exercises	150
8	Admissibility	155
8.1	Admissibility and completeness	156
8.2	Admissibility and minimax	158
8.3	Admissibility and Bayes	159
8.3.1	<i>Proper Bayes rules</i>	159
8.3.2	<i>Generalized Bayes rules</i>	160
8.4	Complete classes	164
8.4.1	<i>Completeness and Bayes</i>	164
8.4.2	<i>Sufficiency and the Rao–Blackwell inequality</i>	165
8.4.3	<i>The Neyman–Pearson lemma</i>	167
8.5	Using the same α level across studies with different sample sizes is inadmissible	168
8.6	Exercises	171
9	Shrinkage	175
9.1	The Stein effect	176
9.2	Geometric and empirical Bayes heuristics	179
9.2.1	<i>Is x too big for θ?</i>	179
9.2.2	<i>Empirical Bayes shrinkage</i>	181
9.3	General shrinkage functions	183
9.3.1	<i>Unbiased estimation of the risk of $x + g(x)$</i>	183
9.3.2	<i>Bayes and minimax shrinkage</i>	185
9.4	Shrinkage with different likelihood and losses	188
9.5	Exercises	188
10	Scoring rules	191
10.1	Betting and forecasting	192
10.2	Scoring rules	193
10.2.1	<i>Definition</i>	193
10.2.2	<i>Proper scoring rules</i>	194
10.2.3	<i>The quadratic scoring rules</i>	195
10.2.4	<i>Scoring rules that are not proper</i>	196

10.3	Local scoring rules	197
10.4	Calibration and refinement	200
	10.4.1 <i>The well-calibrated forecaster</i>	200
	10.4.2 <i>Are Bayesians well calibrated?</i>	205
10.5	Exercises	207
11	Choosing models	209
11.1	The “true model” perspective	210
	11.1.1 <i>Model probabilities</i>	210
	11.1.2 <i>Model selection and Bayes factors</i>	212
	11.1.3 <i>Model averaging for prediction and selection</i>	213
11.2	Model elaborations	216
11.3	Exercises	219
	Part Three Optimal Design	221
12	Dynamic programming	223
12.1	History	224
12.2	The travel insurance example revisited	226
12.3	Dynamic programming	230
	12.3.1 <i>Two-stage finite decision problems</i>	230
	12.3.2 <i>More than two stages</i>	233
12.4	Trading off immediate gains and information	235
	12.4.1 <i>The secretary problem</i>	235
	12.4.2 <i>The prophet inequality</i>	239
12.5	Sequential clinical trials	241
	12.5.1 <i>Two-armed bandit problems</i>	241
	12.5.2 <i>Adaptive designs for binary outcomes</i>	242
12.6	Variable selection in multiple regression	245
12.7	Computing	248
12.8	Exercises	251
13	Changes in utility as information	255
13.1	Measuring the value of information	256
	13.1.1 <i>The value function</i>	256
	13.1.2 <i>Information from a perfect experiment</i>	258
	13.1.3 <i>Information from a statistical experiment</i>	259
	13.1.4 <i>The distribution of information</i>	264
13.2	Examples	265
	13.2.1 <i>Tasting grapes</i>	265
	13.2.2 <i>Medical testing</i>	266
	13.2.3 <i>Hypothesis testing</i>	273
13.3	Lindley information	276
	13.3.1 <i>Definition</i>	276
	13.3.2 <i>Properties</i>	278
	13.3.3 <i>Computing</i>	280
	13.3.4 <i>Optimal design</i>	281

13.4	Minimax and the value of information	283
13.5	Exercises	285
14	Sample size	289
14.1	Decision-theoretic approaches to sample size	290
14.1.1	<i>Sample size and power</i>	290
14.1.2	<i>Sample size as a decision problem</i>	290
14.1.3	<i>Bayes and minimax optimal sample size</i>	292
14.1.4	<i>A minimax paradox</i>	293
14.1.5	<i>Goal sampling</i>	295
14.2	Computing	298
14.3	Examples	302
14.3.1	<i>Point estimation with quadratic loss</i>	302
14.3.2	<i>Composite hypothesis testing</i>	304
14.3.3	<i>A two-action problem with linear utility</i>	306
14.3.4	<i>Lindley information for exponential data</i>	309
14.3.5	<i>Multicenter clinical trials</i>	311
14.4	Exercises	316
15	Stopping	323
15.1	Historical note	324
15.2	A motivating example	326
15.3	Bayesian optimal stopping	328
15.3.1	<i>Notation</i>	328
15.3.2	<i>Bayes sequential procedure</i>	329
15.3.3	<i>Bayes truncated procedure</i>	330
15.4	Examples	332
15.4.1	<i>Hypotheses testing</i>	332
15.4.2	<i>An example with equivalence between sequential and fixed sample size designs</i>	336
15.5	Sequential sampling to reduce uncertainty	337
15.6	The stopping rule principle	339
15.6.1	<i>Stopping rules and the Likelihood Principle</i>	339
15.6.2	<i>Sampling to a foregone conclusion</i>	340
15.7	Exercises	342
	Appendix	345
A.1	Notation	345
A.2	Relations	349
A.3	Probability (density) functions of some distributions	350
A.4	Conjugate updating	350
	References	353
	Index	367
