1. Just How Unreasonable is the Effectiveness of Mathematics?	1
1.1 Introduction	1
1.2 Mystery Mongering	2
1.3 Mathematical Optimism	10
1.4 Mathematical Opportunism	15
2. Approaching Models: Formal and Informal	24
2.1 Introduction	24
2.2 One Extreme: The Structuralists	27
2.3 The Other Extreme: Giere's Account of Models	30
2.4 Surplus Structure	36
2.5 Partial Structures	41
2.6 Problems with Isomorphism	45
2.7 The Inferential Conception	51
2.8 Conclusion	54
3. Scientific Representation and the Application of Mathematics	55
3.1 Introduction	55
3.2 General Challenge: Reducing all Representations to the Mental	57
3.3 Specific Challenges to the Formal Account	60
3.3.1 Necessity	60
3.3.2 Sufficiency	61
3.3.3 Logic	61
3.3.4 Mechanism	62
3.3.5 Style	62
3.3.6 Misrepresentation	62
3.3.7 Ontology	63
3.4 The Formal Account Defended	63
3.4.1 Preamble: Informational vs Functional Accounts	63
3.4.2 Necessity	65
3.4.3 Logic and Sufficiency	66
3.4.4 Mechanism	67
3.4.5 Style	67
3.4.6 Misrepresentation	68
3.4.7 Ontology	70

4. Applying New Mathematics: Group Theory and Quantum Mechanics	72
4.1 Introduction	72
4.2 The Historical Context	73
4.3 Applying Group Theory to Atoms	76
4.3.1 A (Very) Brief History of Quantum Statistics	76
4.3.2 The ‘Wigner Programme’	78
4.3.3 The ‘Weyl Programme’	82
4.4 Applying Group Theory to Nuclei	91
4.5 Conclusion	98
5. Representing Physical Phenomena: Top-Down and Bottom-Up	101
5.1 Introduction	101
5.2 From the Top: The Applicability of Mathematics	101
5.3 Bose–Einstein Statistics and Superfluidity	103
5.3.1 The Liquid Degeneracy of Helium	103
5.3.2 The Application of Bose–Einstein Statistics	104
5.4 The Autonomy of London’s Model	111
5.5 Conclusion	114
6. Unifying with Mathematics: Logic, Probability, and Quantum States	116
6.1 Introduction	116
6.2 Group Theory, Hilbert Spaces, and Quantum Mechanics	116
6.3 Logic and Empiricism	122
6.4 The 1937 Manuscript: Logics and Experience	123
6.5 The Status of Mathematics	127
7. Applying Problematic Mathematics, Interpreting Successful Structures: From the Delta Function to the Positron	130
7.1 Introduction	130
7.2 Dirac and the Delta Function	131
7.2.1 Introducing the Delta Function	131
7.2.2 Dispensing with the Delta Function	134
7.2.3 The Status of the Delta Function	136
7.3 The Pragmatic and Heuristic Role of Mathematics in Physics	138
7.4 The Discovery of Antimatter	141
7.5 Conclusion	148
8. Explaining with Mathematics? From Cicadas to Symmetry	151
8.1 Introduction	151
8.2 The Strong Claim and Indispensability	151
8.3 The Enhanced Indispensability Argument and Explanation	159
8.3.1 Indexing and Representing	161
8.3.2 Explaining	167
8.4 The Weak Claim and the Hybridity of Spin	173
8.5 Conclusion	182

9. Explaining with Mathematics? Idealization, Universality, and the Criteria for Explanation	183
9.1 Introduction	183
9.2 Immersion, Inference, and Partial Structures	183
9.3 Idealization and Surplus Structure	185
9.4 The Rainbow	189
9.5 Accommodating Process and Limit Operations	191
9.6 Renormalization and the Stability of Mathematical Representations	193
9.7 Structural Explanations	199
9.8 Explanation and Eliminability	203
9.9 Requirements for Explanation	206
9.10 Attempts at Explanation	209
9.11 Interpretation and Idealization	218
9.12 Conclusion: Explanation and the Inferential Conception	219
10. Conclusion: Between Lazy Optimism and Unbridled Opportunism	222
10.1 Introduction	222
10.2 The $\Omega$ Case	223
10.3 Partial Structures as a Meta-Level Device	227
