

TABLE OF CONTENTS

<u>Chapter I.</u> TECHNOLOGY ON TRIAL	19
1. Disenchantment with technology and "technological progress"	19
a) Technophiles and technophobes	21
b) Power from knowledge	<u>22</u>
c) Social accounting of technological change	24
2. Main features of technological society	26
a) Techno-scientific complex	27
b) Characteristics of technological society	28
3. Frustration resulting from technological civilisation	33
a) Grievances against science and technology	34
b) Betrayal of scientists and technologists	35
c) Lack of ethical understanding	<u>37</u>
4. Failure to respond to social aspirations	40
a) General climate for science and technology	40
b) Broken dialogue between technology and society	42
5. Demand for control of technology	45
a) Food and robins	46
b) Community's interest in technology	47
c) Control without stifling	49
<u>Chapter II.</u> CONCEPTS OF TECHNOLOGY ASSESSMENT ...	53
1. Definitions and dimensions	53
a) Appraisal of technological "progress"	54
b) Systematic analysis of socio-technical systems	55
c) Social impact analysis	57
d) Evaluation of alternative technologies	59
e) Study of technological futures	61
f) Control and management of technology	65

2.	Economics of technology assessment	67
a)	Residual factor	68
b)	Intangible capital	69
c)	External effects	70
d)	Social economy of technological change	74
3.	Conceptual levels and focus points	76
a)	Technology	78
b)	Economy	79
c)	Society	81
d)	Individual	81
e)	Environment	83
f)	Value and social aspects of decision-making	84
g)	Choice of a starting point	86
h)	Appropriate level of assessment	88
4.	Modes of analysis	91
a)	Specificity of technology assessment	92
b)	Epistemic approach	94
c)	Problem-solving framework	96
d)	Institutional framework	99
e)	Teleological framework	101
5.	Scope delineation and quantification	105
a)	Prerequisites	105
b)	Understanding of inter-relationships	107
c)	To quantify or not to quantify?	109
d)	Ranking of social values	112

<u>Chapter III. EXPERIMENTS AND DEVELOPMENT OF</u>		
	METHODOLOGIES	115
1.	General framework of assessment methodology	115
a)	Three experiments of the US National Academy of Engineering	115
b)	MITRE/OST pilot technological assessments	118
c)	Approach of the Japanese Ministry of International Trade and Industry	132
d)	Context of technology assessment	134
e)	Government process of solving social problems	136
2.	Typology of technology assessment studies	140
a)	Experience of US federal agencies	140
b)	Typology of assessment formats	145
3.	Basic modes of apprehending the future	200
a)	Levels of inference	200
b)	Fundamental methodological approaches	202

4.	Cost/benefit analysis in technology assessment studies ...	207
	a) Main stages of cost/benefit analysis	208
	b) Utility and impact	210
	c) Preventive computation of impacts	214
	d) Cost/benefit analysis as a learning process	215
	e) General criteria and techniques of evaluation	217
5.	Full social assessment of technology	224
	a) Mapping of societal consequences	225
	b) The Delphi method	226
	c) Relevance tree	234
	d) Event evaluation and review	236
	e) Relevance matrix	237
	f) Cross-impact techniques	241
	g) Multi-discipline systems approach	247
	h) Technology assessment function	248
	i) Goal-oriented methodologies	252
 <u>Chapter IV. AREAS FOR THE APPLICATION OF</u>		
<u>TECHNOLOGY ASSESSMENT</u>		263
1.	Monitoring of negative side-effects of existing technologies	263
	a) Thresholds of public perception	264
	b) Interdependencies between technological and societal phenomena	265
	c) Unexpected impacts on social groups	266
2.	Environmental quality	270
	a) Choice of optimisation instruments	271
	b) Causes of environmental deterioration and environmental quality levels	274
	c) Design of environment	276
	d) Control-oriented approach	279
	e) Environmental evaluation system	281
	f) Evaluating environmental impact	285
	g) Optimum environment and standards	289
3.	Recycling of resources	293
	a) Utilisation of residuals	293
	b) Recovery of non-renewable resources	297
	c) Resource management approach	299
4.	Screening of scientific knowledge and R and D results	303
	a) Systematic scrutiny of scientific discoveries	304
	b) Relevance of linkages between science and technology .	306
	c) Degree of innovative contents	308
	d) Choice of new technological opportunities	310

5.	Desirable new technologies	317
	a) Technology as a dependent variable	319
	b) Programming by objective in the field of technology ..	320
	c) Vectors of functional capabilities	324
	d) Profiles of desired new technologies	328

Chapter V. PROMISES AND PROBLEMS OF TECHNOLOGY

	ASSESSMENT	331
1.	Institutional framework	331
	a) Obsolescence of existing policy-making patterns	331
	b) Technology assessment in government	334
	c) The role of legislatures	336
2.	New specialised institutions	339
	a) Examples of new solutions	340
	b) Principles of effective technology assessment institutions	342
	c) "Innovative branch" of government	347
3.	Analysts and decision-makers	350
	a) Continuous evaluation of the states of society	350
	b) Pragmatic approach and social planner's approach ...	351
	c) Internalised assessment and externalised assessment .	355
	d) Reciprocal learning system	358
4.	Pluralistic assessment	362
	a) Innovators	363
	b) Utilizers	363
	c) Governmental techno-scientific complex	364
	d) Legal order	365
	e) Competitive assessment	367
5.	Toward a humanly and socially relevant technology	371
	a) Changing the scale of values	371
	b) Search for new goals	373
	c) Limits to a "global system"	374
	d) Technology for Man	376
	CONCLUSION	379
	BIBLIOGRAPHY	391
