## Acknowledgements

0.	Overview of the general part of the thesis	
i.	The approach	7
ii.	The framework	10
iii.	The motivation	12
I.	Ontological reductionism	
	Preliminary remark and abstract	15
	Framework	
i.	Truth-maker realism	16
ii.	The layered view of the world	18
iii.	Compatibility of the framework	21
	Premises	
iv.	Completeness of physics (premise one)	24
v.	Incompleteness of the special sciences	29
vi.	Redundancy of epiphenomena	31
vii.	Supervenience (premise two)	33
viii.	Status of supervenience	36
	Ontology of property tokens	
ix.	Property discrimination by causal difference	41
x.	Identity by causal indifference	45
xi.	Causal efficacy of property tokens of the special sciences	48
xii.	Change dependency of property tokens of the special sciences	49
xiii.	Change determination by physics	50
	Argument for ontological reductionism	
xiv.	Token-identity qua causal efficacy and completeness	51
xv.	Status of the token-identity argument	56
xvi.	Objection to the causal drainage argument	58
	Résumé and transition	61

Table of contents

II.	Epistemological reductionism	
	Preliminary remark and abstract	63
	Framework	
i.	Concept of theories	64
ii.	Concept of property types	65
iii.	Concept of concepts	68
iv.	Concept of explanation	71
	Motivation and conditions for epistemological reductionism	
v.	Supervenience of truth-values	79
vi.	Universality of physical concepts	82
vii.	Motivation for epistemological reductionism	83
viii.	Necessity of co-extensionality for epistemological reductionism	85
	Models for epistemological reductionism	
ix.	Nigel's model of reduction	89
x.	Kim's model of reduction	99
xi.	Functionally defined concepts	109
xii.	Universality of functionally defined concepts	113
	An argument against epistemological reductionism	
xiii.	Argument of multiple realization	117
xiv.	Consequences for Nagel's model	120
xv.	Consequences for Kim's model	123
xvi.	Implication of multiple realization	131
xvii.	Critique of the multiple realization argument	133
	New strategy for epistemological reductionism	
xviii.	Detectability of physical differences	138
xix.	Implication of detectability	148
xx.	Relationship between concept and sub-concepts	152
xxi.	Epistemological reductionism by means of sub-concepts	157
	Résumé and transition	166

Table of contents

III.	Complete conservative reductionism	
	Preliminary remark and abstract	167
	Implication from ontological reductionism to epistemological reductionism	
i.	Starting point ontological reductionism	168
ii.	Implication of anti-reductionism	169
iii.	Conclusion	172
	Implication from epistemological reductionism to ontological reductionism	
iv.	Starting point epistemological reductionism	173
v.	Incompatibility of epistemological reductionism with property dualism	174
vi.	Conclusion	176
	Complete conservative reductionism	
vii.	What complete reductionism means	177
viii.	What conservative reductionism means	178
ix.	The limits of the sub-concept strategy	181
	Résumé and transition to the biological part	182
IV.	Overview of the biological part	
i.	Historical framework	183
ii.	Systematic framework	192
iii.	The approach	199
V.	Classical genetics	
	Preliminary remark and abstract	207
i.	Introduction to classical genetics	208
ii.	The concept of supervenience applied to classical genetics	211
iii.	The importance of the gene concept	215
iv.	Functional characterization of the gene	220
v.	The explanatory limits of classical genetics	228

Table of contents

VI.	Molecular genetics	
	Preliminary remark and abstract	231
i.	Introduction to molecular genetics	232
ii.	Causal disposition of the DNA	238
iii.	Relative completeness of molecular genetics	242
iv.	Argument for the token-identity of genes and DNA	247
v.	Motivation for the reductionist approach to classical genetics	253
VII.	Reduction of classical genetics to molecular genetics	
	Preliminary remark and abstract	257
i.	Introduction to the relationship	258
ii.	The multiple realization argument applied to genetics	262
iii.	Construction of sub-concepts	269
iv.	Reduction of classical genetics to molecular genetics	289
v.	Final remarks	297
