<i>Preface</i>	page ix
PART ONE: THE NEWTONIAN REVOLUTION AND THE NEWTONIAN STYLE	
1 The Newtonian revolution in science	3
1.1. <i>Some basic features of the Scientific Revolution</i>	3
1.2. <i>A Newtonian revolution in science: the varieties of Newtonian science</i>	9
1.3. <i>Mathematics in the new science (1): a world of numbers</i>	17
1.4. <i>Mathematics in the new science (2): exact laws of nature and the hierarchy of causes</i>	21
1.5. <i>Causal mathematical science in the Scientific Revolution</i>	33
2 Revolution in science and the Newtonian revolution as historical concepts	39
2.1. <i>The concept of revolution</i>	39
2.2. <i>The introduction of the concept of revolution to describe scientific progress</i>	42
2.3. <i>The Newtonian revolution in the sciences</i>	49
3 The Newtonian revolution and the Newtonian style	52
3.1. <i>Some basic features of Newtonian exact science: mathematics and the disciplined creative imagination</i>	52
3.2. <i>Mathematics and physical reality in Newton's exact science</i>	61
3.3. <i>Newton's use of imagined systems and mathematical constructs in the Principia</i>	68
3.4. <i>Gravitation and attraction: Huygens's reaction to the Principia</i>	79
3.5. <i>Newton's path from imagined systems or constructs and mathematical principles to natural philosophy: the System of the World</i>	83

Supplement to 3.5: <i>Newton's first version of his System of the World and his "mathematical way" in fact and fiction</i>	93
3.6. <i>Mathematical systems or constructs and the review of the Principia in the Journal des Sçavans</i>	96
3.7. <i>Newton's three-phase procedure in action: Newton's constructs compared to Descartes's models and to those in use today</i>	99
3.8. <i>Newton's third phase and its sequel: the cause of gravitation</i>	109
3.9. <i>The Newtonian revolution as seen by some of Newton's successors: Bailly, Maupertuis, Clairaut</i>	120
3.10. <i>The Newtonian revolution in the perspective of history</i>	127
Supplement to 3.10: <i>Newtonian style or Galilean style</i>	132
3.11. <i>Optics and the Newtonian style</i>	133
3.12 <i>The ongoing Newtonian revolution and the Newtonian style: mathematics and experience</i>	141
PART TWO: TRANSFORMATIONS OF SCIENTIFIC IDEAS	
4 The transformation of scientific ideas	157
4.1. <i>A Newtonian synthesis?</i>	157
4.2. <i>Transformations of scientific ideas</i>	162
4.3. <i>Some examples of the transformation of scientific ideas: Darwin and intraspecific competition, Franklin and the electrical fluid</i>	166
4.4. <i>Some transformations of ideas by Newton, primarily the transformation of impulsive forces into continually acting forces and the formulation of Newton's third law</i>	171
4.5. <i>Newtonian inertia as an example of successive transformations</i>	182
4.6. <i>Some general aspects of transformations</i>	194
4.7. <i>The transformation of experience</i>	203
4.8. <i>The uniqueness of scientific innovation: Freud on originality</i>	216
4.9 <i>Transformations and scientific revolutions</i>	218
5 Newton and Kepler's laws: stages of transformation leading toward universal gravitation	222
5.1. <i>Kepler's laws and Newtonian principles</i>	222
5.2. <i>The status of Kepler's laws in Newton's day</i>	224
5.3. <i>Newton's early thoughts on orbital motion and Kepler's third law</i>	229
Supplement to 5.3. <i>An early computation of the moon's 'endeavour of receding' and a planetary inverse-square law</i>	238

Contents

ix

<i>5.4. Newton and dynamical astronomy in the years before 1684: correspondence with Hooke in 1679–1680</i>	241
<i>5.5. The Newtonian discovery of the dynamical significance of Kepler's area law: the concept of force</i>	248
<i>5.6. From Kepler's laws to universal gravitation</i>	258
<i>5.7. The role of mass in Newtonian celestial mechanics</i>	271
<i>5.8. Kepler's laws, the motion of the moon, the Principia, and the Newtonian Scientific Revolution</i>	273
<i>Supplement: History of the concept of transformation: a personal account</i>	280
<i>Notes</i>	290
<i>Bibliography</i>	361
<i>Index</i>	397
