| <i>General Editors' Preface</i> | xxiii |
| Introduction | I |
| MICHAEL H. SHANK AND DAVID C. LINDBERG | |
| I Islamic Culture and the Natural Sciences | 27 |
| F. JAMIL RAGEP | |
| The Historical and Cultural Background | 29 |
| The Translation of Greek Natural Philosophy into Arabic: Background and Motivations | 34 |
| Translators and Their Patrons | 38 |
| The Natural Philosophy Tradition in Islam | 40 |
| Defenders and Practitioners of Natural Philosophy | 45 |
| The Theological (<i>kalām</i>) Approach to the Phenomenal World | 53 |
| Transformations and Innovations in Islamic Natural Philosophy | 57 |
| 2 Islamic Mathematics | 62 |
| J. L. BERGGREN | |
| Sources of Islamic Mathematics | 62 |
| Mathematics and Islamic Society | 64 |
| The Social Setting of Mathematics in Medieval Islam | 67 |
| Arithmetic | 69 |
| Algebra | 71 |
| Indeterminate Equations | 74 |
| Number Theory | 74 |
| Combinatorics | 77 |
| The Tradition of Geometry | 77 |
| Foundations of Geometry | 80 |

| | |
|---|------------|
| Trigonometry | 81 |
| The Astrolabe | 82 |
| Conclusion | 83 |
| 3 The Mixed Mathematical Sciences: Optics and Mechanics in the Islamic Middle Ages | 84 |
| ELAHEH KHEIRANDISH | |
| Highlights | 86 |
| Heritage | 90 |
| Transmission | 91 |
| Developments: Context | 94 |
| Developments: Optics | 97 |
| Developments: Mechanics | 103 |
| Conclusion | 107 |
| 4 Islamic Astronomy | 109 |
| ROBERT G. MORRISON | |
| The Applications of Astronomy: Time, Prayer, and Astrology | 111 |
| The Astrolabe | 114 |
| Transmission and Translations | 116 |
| Observational Astronomy | 118 |
| Ptolemy's Models and Ensuing Criticisms of the Ptolemaic Equant Hypothesis | 121 |
| Astronomy and Natural Philosophy | 124 |
| Planetary Theory in the Islamic West | 127 |
| The Marāgha Observatory: Planetary Theory and Observational Astronomy | 129 |
| Astronomy in Religious Scholarship | 135 |
| Developments in the Fifteenth Century and Thereafter | 137 |
| 5 Medicine in Medieval Islam | 139 |
| EMILIE SAVAGE-SMITH | |
| Pre-Islamic Medicine | 140 |
| Early Islamic Medicine | 141 |
| The Learned Medical Tradition | 145 |
| Ophthalmology | 151 |
| Pharmacology | 152 |
| Anatomy | 153 |
| The Practice of Medicine | 157 |
| Theory versus Practice | 162 |
| 6 Science in the Jewish Communities | 168 |
| Y. TZVI LANGERMANN | |
| The Emergence of a Hebrew Scientific Literature | 169 |
| Survey by Community | 171 |
| Survey by Discipline | 174 |
| The Impact of Science on Jewish Thought | 184 |

| | | |
|-----------|--|-----|
| 7 | Science in the Byzantine Empire | 190 |
| | ANNE TIHON | |
| | Mathematics | 192 |
| | Astronomy | 195 |
| | Astrology | 199 |
| | Music Theory | 200 |
| | Geography | 201 |
| | Optics and Mechanics | 202 |
| | Alchemy and Chemistry | 203 |
| | Botany | 204 |
| | Zoology | 205 |
| | Conclusion | 206 |
| 8 | Schools and Universities in Medieval Latin Science | 207 |
| | MICHAEL H. SHANK | |
| | From Benedictine Expansion to the Urban Schools | 209 |
| | The Rise of Guilds of Masters and Students | 214 |
| | The University as Guild | 217 |
| | The Study of Nature and the Faculty Structure | 219 |
| | Teaching and Learning: Lectures, Commentaries, and Disputations | 222 |
| | Clerical Status and Social Parameters | 224 |
| | The Expansion of the University | 228 |
| | Curricular Tradition, Innovation, and Specialization | 230 |
| | The Circulation of Knowledge about Nature | 235 |
| | Beyond the Halls of the University | 236 |
| | Conclusion | 238 |
| 9 | The Organization of Knowledge: Disciplines and Practices | 240 |
| | JOAN CADDEN | |
| | The Era of the Liberal Arts: Fifth to Twelfth Centuries | 242 |
| | Cultural Confluences and Transformations of the Arts: Twelfth Century | 250 |
| | The Era of the Faculties of Arts: Thirteenth to Fourteenth Centuries | 254 |
| | Conclusion | 265 |
| 10 | Science and the Medieval Church | 268 |
| | DAVID C. LINDBERG | |
| | Methodological Precepts | 269 |
| | Augustine and the Handmaiden Formula | 271 |
| | Early-Medieval Science and the Recovery of the Classical Tradition | 274 |
| | Accommodation in the Thirteenth Century | 276 |
| | The Course of Events | 278 |
| | Late-Medieval Developments | 280 |
| | Concluding Generalizations | 282 |

| | | |
|-----------|---|-----|
| 11 | Natural Knowledge in the Early Middle Ages | 286 |
| | STEPHEN C. McCLUSKEY | |
| | Antique Learning in Ostrogothic Italy | 286 |
| | Natural Knowledge in the Visigothic Court | 287 |
| | Miracles and the Natural Order | 289 |
| | Christian Feasts and the Solar Calendar | 292 |
| | <i>Computus</i> and the Date of Easter | 294 |
| | Monastic Timekeeping | 298 |
| 12 | Early-Medieval Cosmology, Astronomy, and Mathematics | 302 |
| | BRUCE S. EASTWOOD | |
| | Cosmology | 302 |
| | Astronomy | 309 |
| | Arithmetic and Geometry | 318 |
| 13 | Early-Medieval Medicine and Natural Science | 323 |
| | VIVIAN NUTTON | |
| | Christianity and Pagan Medicine | 323 |
| | The Decline of Medicine? | 326 |
| | The Triumph of Galenism in the East | 327 |
| | Late Latin Texts on Medicine and Natural Science | 332 |
| | Medicine and Natural Science in and out of the Monastery | 336 |
| 14 | Translation and Transmission of Greek and Islamic Science to Latin Christendom | 341 |
| | CHARLES BURNETT | |
| | The Course of the Translations | 341 |
| | Goals | 345 |
| | Greek or Arabic? | 347 |
| | Sources | 349 |
| | Patrons | 351 |
| | Translators | 354 |
| | Techniques | 356 |
| | From <i>Translatio studii</i> to <i>Respublica philosophorum</i> | 363 |
| 15 | The Twelfth-Century Renaissance | 365 |
| | CHARLES BURNETT | |
| | The Idea of a Renaissance | 365 |
| | The Systematization of Administration and Learning | 367 |
| | The Recovery of Roman and Greek Culture | 368 |
| | The Widening Boundaries of <i>Philosophia</i> | 370 |
| | The Rise of Specialization | 372 |
| | The Refinement of Language | 375 |
| | The Development of Methods of Scientific Argument | 377 |
| | The Potential of Man | 383 |

| | | |
|-----------|--|-----|
| 16 | Medieval Alchemy | 385 |
| | WILLIAM R. NEWMAN | |
| | The Origins of Medieval European Alchemy | 385 |
| | The Thirteenth Century | 390 |
| | Albertus Magnus | 391 |
| | Roger Bacon | 392 |
| | The <i>Summa Perfectionis</i> of "Geber" | 394 |
| | Alchemy in the Late Middle Ages | 397 |
| | Conclusion | 402 |
| 17 | Change and Motion | 404 |
| | WALTER ROY LAIRD | |
| | Change and Motion | 405 |
| | Place and Time | 409 |
| | Motion in a Void | 411 |
| | Bradwardine's Rule | 415 |
| | Falling Bodies and Projectiles | 419 |
| | Projectile Motion and the Theory of Impetus | 421 |
| | Acceleration of Falling Bodies | 424 |
| | The Oxford Calculators and the Mean-Speed Theorem | 426 |
| | Celestial Movers | 432 |
| 18 | Cosmology | 436 |
| | EDWARD GRANT | |
| | Is the World Created or Eternal? | 439 |
| | The Two Parts of the World: Celestial and Terrestrial | 440 |
| | Aristotle and Ptolemy | 443 |
| | The Number of Orbs and the Order of the Planets | 445 |
| | The Theological Spheres | 447 |
| | Celestial Motions and Their Causes | 448 |
| | Dimensions of the World | 451 |
| | Existence Beyond the Cosmos | 452 |
| 19 | Astronomy and Astrology | 456 |
| | JOHN NORTH | |
| | Planetary Astronomy | 459 |
| | Observation and Calculation | 460 |
| | The Alfonsine Tables | 468 |
| | Critics of the Old Astronomy | 470 |
| | Astrology | 473 |
| | Court Astrology and Patronage | 475 |
| | Popular Astrology | 477 |
| | Appendix: The Ptolemaic Theory of Planetary Longitude as Applied in the Middle Ages | 478 |
| 20 | The Science of Light and Color, Seeing and Knowing | 485 |
| | DAVID C. LINDBERG AND KATHERINE H. TACHAU | |
| | Greek Beginnings | 486 |

| | | |
|-----------|---|-----|
| | The Islamic Contribution | 491 |
| | The Beginnings of <i>Perspectiva</i> in Thirteenth-Century Europe | 497 |
| | The Baconian Synthesis | 501 |
| | The Rainbow and Its Colors | 505 |
| | Colors, Appearances, and the Knowability of the World | 507 |
| | The Diffusion of <i>Perspectiva</i> After Roger Bacon | 509 |
| 21 | Mathematics | 512 |
| | A. GEORGE MOLLAND | |
| | Boethius and the Early Middle Ages | 513 |
| | Semiotic Considerations | 514 |
| | From Boethius to the Twelfth-Century Renaissance | 516 |
| | The Twelfth Century | 517 |
| | Doing Mathematics: Leonardo of Pisa | 520 |
| | Considering Mathematics: Jordanus de Nemore and the Universities | 523 |
| | Ratios and Proportions | 527 |
| | Conclusion | 530 |
| 22 | Logic | 532 |
| | E. JENNIFER ASHWORTH | |
| | Background: Texts and Institutions | 533 |
| | The Nature of Logic | 536 |
| | Demonstration and Scientific Method | 537 |
| | New Techniques: Sophismata and Obligations | 538 |
| | Signification | 541 |
| | Supposition | 542 |
| | Compounded and Divided Senses | 544 |
| | Syncategoremata; Proofs of Terms | 545 |
| | Conclusion | 547 |
| 23 | Geography | 548 |
| | DAVID WOODWARD | |
| | Scholarly Mathematical Geography and the Worldview | 548 |
| | Descriptive Geographies of the World and <i>Mappaemundi</i> | 553 |
| | Local Descriptions and Measurements of Land and Property | 560 |
| | Wayfinding and Navigation with Itineraries and Charts | 562 |
| | Conclusions | 567 |
| 24 | Medieval Natural History | 569 |
| | KAREN MEIER REEDS AND TOMOMI KINUKAWA | |
| | Natural History's Place in the Medieval Intellectual World | 570 |
| | Experience and the World of Particulars | 575 |
| | The Practice and Use of Natural History | 578 |
| | The Depiction of Nature | 583 |
| 25 | Anatomy, Physiology, and Medical Theory | 590 |
| | DANIELLE JACQUART | |
| | Anatomical Knowledge: A Slow Reconstruction | 592 |

| | | |
|-----------|---|-----|
| | Humors, “Virtues,” and Qualities | 596 |
| | From Health to Disease | 602 |
| | From Theory to Practice | 606 |
| 26 | Medical Practice | 611 |
| | KATHARINE PARK | |
| | “Between Doctors and Holy Shrines,” 1050–1200 | 613 |
| | Urbanization and the Transformation of Medical Practice, 1200–1350 | 617 |
| | The Elaboration of Medical Institutions, 1350–1500 | 624 |
| 27 | Technology and Science | 630 |
| | GEORGE OVITT | |
| | The Intellectual Context of Medieval European Technology | 631 |
| | Classical and Asian Influences on Medieval Technology | 633 |
| | Agricultural Technology | 635 |
| | Power Technologies | 636 |
| | Textile Production | 637 |
| | Military Technology | 639 |
| | Medieval Ships and Shipbuilding | 641 |
| | Building Construction and the Gothic Cathedrals | 642 |
| | Conclusion | 643 |
| | <i>Index</i> | 645 |
