Introduction 1

PART I
MATHEMATICS, EXPLANATION, AND UNDERSTANDING

1. Abstraction and Idealisation: Understanding via Models 15
2. From the Pure to the Concrete: How Mathematics Yields Physical Information 50

PART II

WHERE MODELS MEET THE WORLD: PROBLEMS AND PERSPECTIVES

3. More Than Make-Believe: Fictions, Models, and Reality 85
4. Mediated Knowledge: Representation and the Theory-Model Axis 119
5. Making the Best of It: Inconsistent versus Complementary Models 156

PART III

COMPUTER SIMULATION: THE NEW REALITY

6. Why Materiality Is Not Enough: Models, Measurement, and Computer Simulation 199
7. Legitimating Simulation: Methodological Issues of Verification and Validation 248
8. Without It There's Nothing: The Necessity of Simulation in the Higgs Search 287
